SUBUNIT: Homotetramer (By similarity).
SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
SIMILARITY: Belongs to the class-II fumarase / aspartase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Fumarase subfamily.

Claim 3; Page 47-48; 53pp; Japanese. The invention relates to a novel human apoptosis-associated fields (AAB60386, AAB60387), designated NT2RM1000558, which contains effector domain (DED) and a caspase family cleavage domain nof inducing apoptosis in cells The invention also relates to acids encoding the protein (AAF77407, AAF77408); variants of to (particularly dominant negative variants); vectors and host comprising a nucleic acid which encodes an apoptosis- associate of the invention; the recombinant production of the protein; against the protein; and methods of screening for compounds where the apoptosis. The apoptosis-related factor is useful in diseases associated with cell proliferation and in screening candidates e.g., for regulating cell proliferation or cell decisionaments the human apoptosis-associated factor NT2RM1000558	T, Kawai Y, To Kawai Y, Coptosis-associfamily-cleavage	factor N factor; domain c disea	AAY24144 ABO62516 ABG00429 ABG13593 ALIGNMENTS	AAG95334 AAO31170 AAW37662 AAW37662 AAW38911 ADB49288 AAB45725 AD005533 ABP43177 AAU49795 ABW46314 AAY20499 ABG04482 ABBG58857
Claim 3; Page 47-48; 53pp; Japanese. The invention relates to a novel human apoptosis-associated factor (AAB60386, AAB60387), designated NT2RM1000558, which contains a death effector domain (DED) and a caspase family cleavage domain and is capable of inducing apoptosis in cells. The invention also relates to nucleic acids encoding the protein (AAF27407, AAF27408); variants of the protein (particularly dominant negative variants); vectors and host cells comprising a nucleic acid which necessary vectors and host cells of the invention; the recombinant production of the protein; an antibody against the protein; and methods of screening for compounds which can regulate apoptosis. The apoptosis-related factor is useful in regulating diseases associated with cell proliferation and in screening drug candidates e.g., for regulating cell proliferation or cell death in ischaemic diseases and chronic viral diseases. The present sequence represents the human apoptosis-associated factor NT2RM1000558	Miyoshi S, Satoh S; ated factor protein with death	TZRM1000558, SEQ ID NO:4.
